RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 20 pages. Original publisher: Aberdeen Proving Ground, MD : Army Research Laboratory, 2010 OCLC Number: (OCoLC)640114311 Subject: Copper salts. Excerpt: . . . 4. Conclusions The addition of metal salts to poly (4-vinyl pyridine) alters the thermal properties of the polymer, with the extent of alteration being highly dependent on the type and loading of the salt. Negligible changes in T were observed for ionic-based ligation, while substantial T g g enhancements were seen for coordination-based ligation. The greatest T enhancement of the g 2 P4VP system (70 C) was observed with the addition of Zn at a 0. 25 molar equivalent loading. The former loading was determined to be the optimal one based on T, as well as ash content g from TGA and a fraction of coordinated pyridine rings from FTIR data. Further characterization of these systems in order to determine material density and conductivity is of interest. In 2 addition, a more thorough study of other salts, including Mg, could yield even greater enhancement of the P4VPs thermal properties. 9 This item ships from La Vergne,TN. Paperback.

Reviews

The most effective publication i at any time read. We have study and i am sure that i will likely to read yet again once again in the foreseeable future. You will not truly feel monotony at anytime of your time (that's what catalogs are for about in the event you request me).

-- **Mr. Rafael Hoeger**

This is actually the very best book i actually have read till now. This is for all those who statte that there was not a worth studying. Its been written in an remarkably straightforward way which is merely following i finished reading this publication by which in fact altered me, modify the way i believe.
