RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: . . . the following factors come into play: 1. The amount of drug, mixture, preparation, or solution, or whatever is to represent the 100 parts. 2. The amount of constituent or ingredient. 3. The amount of constituent or ingredient as expressed in percentage. 4. The amount of drug, mixture, etc. , expressed in percentage. This is always 100, and is never sought as an answer. 5. The amount of diluent or solvent. For sake of brevity let us designate drug, mixture, preparation, or solution by M, standing for mixture; constituent or ingredient by C, standing for constituent; percentage by its customary symbol, %; and diluent or solvent by D. In percentage problems there are four cases possible: (1) M may be sought, the other factors being known; (2) In order that comparisons may be readily made--made by inspection--such data should be reduced to some common standard or scale; and the number 100 is selected, rather than 12, 144, or any other number, for arithmetical reasons. C may be sought; (3) % may be the element to be calculated; (4) the amount of diluent or solvent may be sought. It should be remembered that percentages in pharmaceutical or chemical problems refer to parts by weight, unless the contrary is expressly stated. Now, if percentages stand for parts by weight, they are proportional to weights of M and of C, and any one of the first three factors--M, C, or %--may be calculated by proportion. D is the difference between...
